PROFESSIONAL SUMMARY

Senior Business Analyst with experience delivering and modernizing financial applications within Capital Markets and FinTech environments. Currently supporting Global Credit IT at Royal Bank of Canada, working closely with business, risk, and technology teams to translate requirements into reliable, data-driven solutions. Strong background in data validation, system modernization, and cross-functional delivery, with growing exposure to Agile execution and product ownership responsibilities.

PROFESSIONAL EXPERIENCE

Royal Bank of Canada (RBC) — Capital Markets, Global Credit IT

Senior Business Analyst / QA | July 2023 – Present

- Senior Business Analyst and QA for multiple Global Credit applications supporting credit risk, monitoring, and lending decisions.
- Worked directly with business and risk users to understand requirements and convert them into clear, actionable requirements for development teams.
- Owned data mapping and validation to ensure accuracy and consistency across upstream and downstream systems impacting lending and risk analysis.
- Worked closely with developers, DBAs, and stakeholders from requirement analysis through production release.
- Ran scrum calls, supported sprint planning, backlog grooming, and helped keep delivery on track across teams.

Tools: SQL, SSMS, Rapid SQL (Sybase), JIRA, Confluence, qTest, Excel

KEY PROJECTS

Transaction Monitoring System (TMS 2.0) | Lead Business Analyst / QA

- Led analysis and testing for TMS 2.0, a modernized replacement of a **25-year-old transaction monitoring application**.
- Supported **500+ users across 4–5 global teams in Canada, New York, London, Australia, and Malaysia**.
- Defined requirements for capturing financial data across Single Name, Borrower, Covenants, and Credit Documentation.
- Ensured newly entered and historical data was accurately stored, retrieved, and reused by downstream risk systems.
- Validated quarterly review generation, dashboards, and graphical outputs used for credit risk assessment.
- Ran scrum calls, coordinated sprints, and supported regression testing to ensure stable production releases.

Client & Credit Management System (CCMS) | Senior Business Analyst / QA

- Worked on CCMS, the authoritative source of client and credit data for Capital Markets.
- Used by **10+ global teams and impacting ~15 downstream applications** supporting credit exposure and approval workflows.
- Supported regulatory expectations for timely and accurate global credit exposure reporting.
- Owned analysis and testing for modules including ETR Profile View, MTM Cap, CPE, Documentation & Security, and Attachments.
- Validated complex data flows across loan, trading, and capital allocation systems to ensure data integrity.
- Participated in scrum calls, coordinated testing cycles, and worked with stakeholders to resolve defects.

Credit Hub Platform | Senior Business Analyst / QA

- Supported delivery of a centralized platform enabling users to access all authorized credit applications from a single interface.
- Helped eliminate manual link management by validating dynamic URL updates after releases, improving usability and operational efficiency.
- Gathered requirements, managed JIRA workflows, facilitated scrum calls, and executed functional and data validation testing.

Credit Monitoring & Analysis Platform (CMAP) | Senior Business Analyst / QA

- Supported delivery of a platform that digitized balance sheet preparation, replacing manual Excel-based workflows.
- Used by **4–5 teams for daily, monthly, and quarterly financial analysis and reporting.**
- Defined requirements for structured financial data entry with real-time calculations and validations.
- Validated complex financial calculations and ensured outputs were accurate and export ready.
- Ran scrum calls and supported sprint execution to ensure timely delivery.

Sybase ASE to Microsoft SQL Server Migration | Senior Business Analyst / QA

- Supported team-wide migration from Sybase ASE to Microsoft SQL Server, handling business analysis and validation for **~6 applications** to ensure data integrity and functional continuity.
- Performed data reconciliation and regression testing to ensure functional parity and zero data loss post-migration.
- Supported transition of SQL development and testing workflows from Rapid SQL to SSMS.

TECHNICAL SKILLS

Data & Databases: SQL, Sybase ASE, Microsoft SQL Server

Tools: SSMS, Rapid SQL, JIRA, Confluence, qTest, Excel

Domains: FinTech, Capital Markets, Credit Risk, Transaction Monitoring, Regulatory Reporting

Methodologies: Agile / Scrum, SDLC, UAT, Regression Testing, Data Validation

EDUCATION

Master of Engineering, Systems Science & Engineering

University of Ottawa, Canada | 2021 – 2023

Bachelor of Technology, Computer Science & Engineering

Navrachana University, India | 2017 – 2021
